Introduction

This document describes the new and innovative FibeAir RFU-C.

RFU-C is a state-of-the-art Radio Frequency Unit which is fully software configurable and supports a broad range of capacities and interfaces.

The RFU supports low to high capacities for traditional voice and Ethernet services, as well as SDH/SONET or hybrid Ethernet and TDM interfaces.

This innovative platform uses an “on-the-fly” upgrade method, whereby network operators only buy capacity as needed, benefiting from savings on initial investments and OPEX.

Traffic capacity throughput and spectral efficiency are optimized with the desired channel bandwidth. For maximum user choice flexibility, channel bandwidths can be selected together with a range of modulations of from QPSK to 256 QAM.

High spectral efficiency is ensured using the same bandwidth for double the capacity, via two carriers, with vertical and horizontal polarizations. This feature is implemented by a built-in XPIC mechanism.

RFU-C works together with two types of indoor units. For SDH/SONET, the RFU works with the FibeAir 1500R indoor unit.

For Ethernet and PDH traffic, RFU-C works with the FibeAir IP-10 indoor unit. Together, FibeAir RFU-C and FibeAir 1500R/IP-10 IDUs provide a powerful, reliable, and comprehensive solution for a variety of wireless network scenarios and requirements.

RFU-C operating in co-channel dual polarization (CCDP) mode, using the cross polarization interference canceller (XPIC) algorithm, two carriers signals can be transmitted over a single channel, using vertical and horizontal polarization. This enables double capacity in the same spectrum bandwidth.

FibeAir RFU-C

Works with

FibeAir 1500R

FibeAir IP-10

Product Overview

Ceragon's FibeAir RFU-C is based on Ceragon's latest RFU technology.

As part of the FibeAir family, RFU-C supports multiple capacities, frequencies, modulation schemes, and configurations for various network requirements.

RFU-C operates in the frequency range of 6-38 GHz, and supports capacities of 10 Mbps to 500 Mbps, for PDH, Ethernet, and SDH/SONET traffic.

The capacity can easily be doubled using a Cross Polarization Interference Canceller (XPIC) algorithm. For example, using XPIC, two STM-1/OC-3 signals can be transmitted over a single 28 MHz channel, with both vertical and horizontal polarization. This enables double capacity in the same spectrum bandwidth.

Main Features

- Operates in the frequency range of 6-38 GHz
- Configurable capacities, from 10 Mbps to 500 Mbps
- Configurable modulations: QPSK, 8, 16, 32, 64, 128, 256 QAM
- Configurable channel bandwidths: 7,10, 14, 20, 25, 28, 29.65, 29, 30, 40 ,50, 56 MHz
- Supports PDH, SDH/SONET, and Ethernet interfaces
- Supports ACM (Adaptive Code Modulation) for QPSK to 256 QAM modulation
- Innovative advanced technology
- Direct or remote antenna mount for all frequencies
- Direct and remote mount installation using the same antenna type
- Main configurations: 1+1, 1+0, 2+0, 2+2
- Built-in XPIC (Cross Polarization Interference Canceller) and Co-Channel Dual Polarized (CCDP)
- Easy frequency sub-band replacement
- Low power consumption
- Compliant with ETSI, FCC, ITU-T, and ITU-R standards and frequency plans, for worldwide operation
- Small, compact, and light
- Fast and simple installation

Applications

Together with the FibeAir Indoors, FibeAir RFU-C can be used for a variety of applications, as a flexible and cost-effective long haul solution.

The following are examples of applications for which FibeAir RFU-C is optimally suited.

Mobile and Fixed Infrastructure

RFU-C is a beneficial solution for the expansion of mobile cellular networks that require high capacity due to an increase in subscribers, cell sites, and data rich applications. It offers smooth migration from existing PDH to SONET/SDH network functionality, and to next generation IP/ATM, using different capacities of from 10 to 500 Mbps.

With its reliable fiber-like transmission/receiving quality and protection capabilities, FibeAir RFU-C is a dependable telecommunications solution for different network topologies, such as ring, mesh, chained, and star, which require both accuracy and stability.

Backhaul for DSL Triple Play Networks

With the highest available throughput on the market, Ceragon provides operators with wireless GBE connectivity of IP-DSLAMs for economical intrction of triple play services including VoIP, Internet services, and IPTV/HDTV over DSL. IP-DSLAM connectivity via wireless links is essential where there is no fiber reach, or as a cost-effective alternative to leased lines.

WiMAX Infrastructure Backhauling

Provides a robust and cost-effective alternative to expensive leased lines, for connectivity between WiMAX base stations expanding network reach.

Broadcast Networks

The scalability and modularity of RFU-C wireless solutions are ideal for effectively building and expanding contribution and distribution digital broadcast networks. Deployed in an ATM-based, SDH backbone, PDH, or IP network, RFU-C offers reliable high quality transmission of Digital Video Broadcast signals and data. Applications include TV, radio, telemedicine, and others.

Private Networks

FibeAir RFU-C provides transparent mid to high capacity connection of enterprise LAN and PBX systems, which reduces communication costs, operating expenses, and maintenance requirements. Wireless high capacity connectivity is ideal for a variety of private networks and enterprises, such as utility operators, corporate facilities, education campuses, hospitals, banks, and others.

Applications include LAN Ethernet connectivity, VoIP, client-server applications, remote storage, video conferencing, TDM E1/T1 services, network infrastructure redundancy, and others.

Government and Emergency Services

Ceragon's RFU-C meets the high-level demands of government customers by providing rapidly deployed, secure, and long distance data transmission, in a single, compact, light weight, and scaleable solution.

Applications include disaster recovery, temporary installations, broadband voice, data and video services, and surveillance and monitoring.

RFU Frequency Bands

RFU-C is available for ITU-R, CEPT, and FCC channels, in accordance with the table below.

All RFU-Cs (6-38 GHz) support 7-56 MHz bands (for capacities of from 10 to 500 Mbps).

7-56 MHz bandwidth is supported for all frequencies (6-38 GHz).

Installation Overview

Direct Mount 1+0

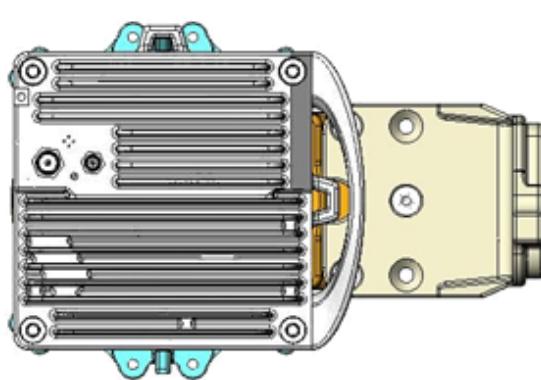

In a direct mount 1+0 configuration, RFU-C is attached directly to the antenna (antenna with RFU-C interface).

For horizontal polarization, the RFU-C is rotated clockwise.

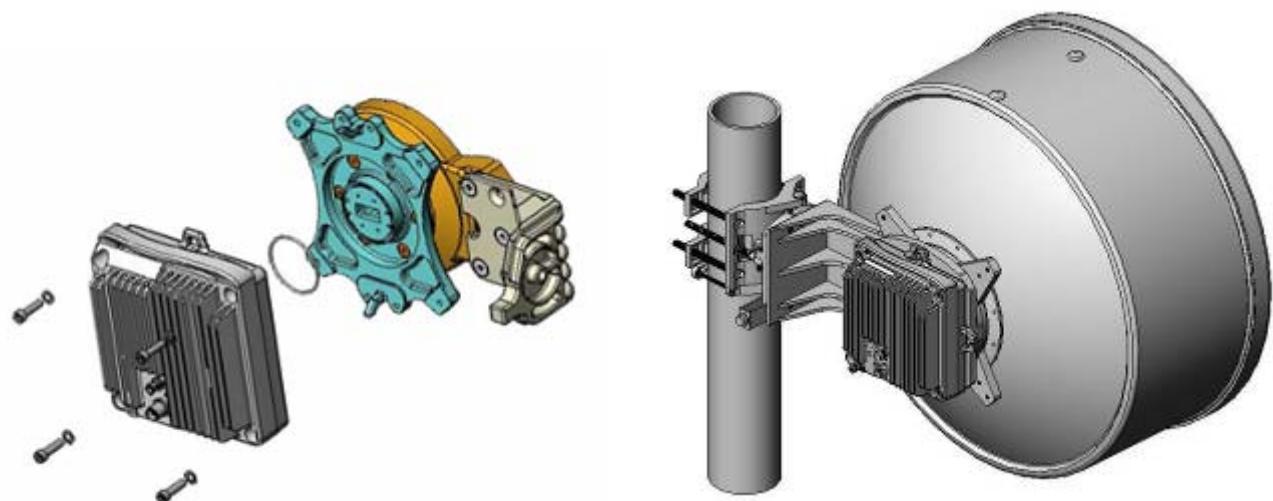

Vertical Pole

Horizontal Pole

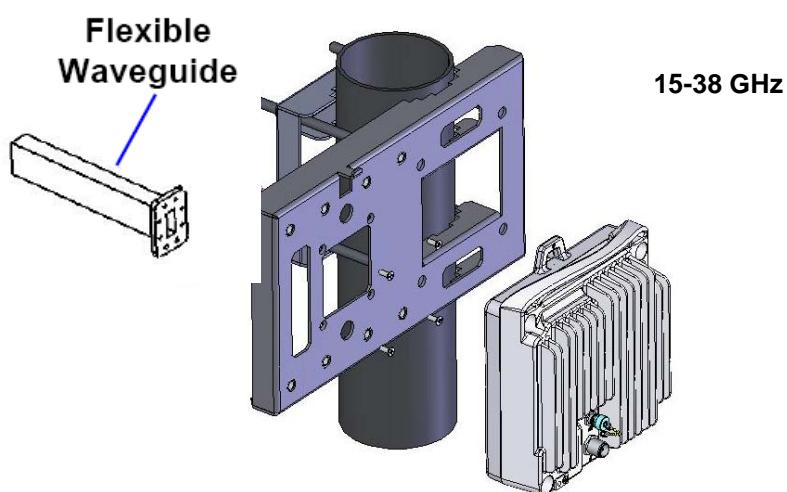

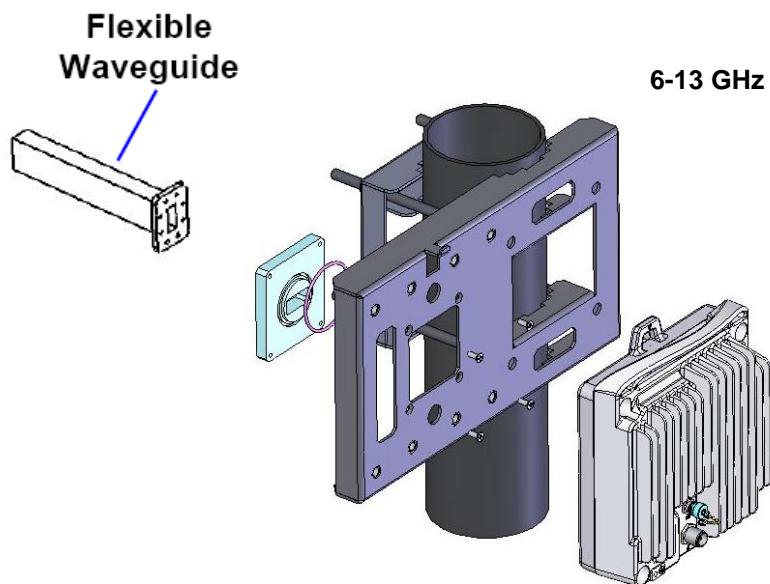

As shown in the following illustration, the RFU-C is placed on the antenna interface, and tightened using four screws.

Remote Mount 1+0

The 1+0 remote mount installation includes the following items:

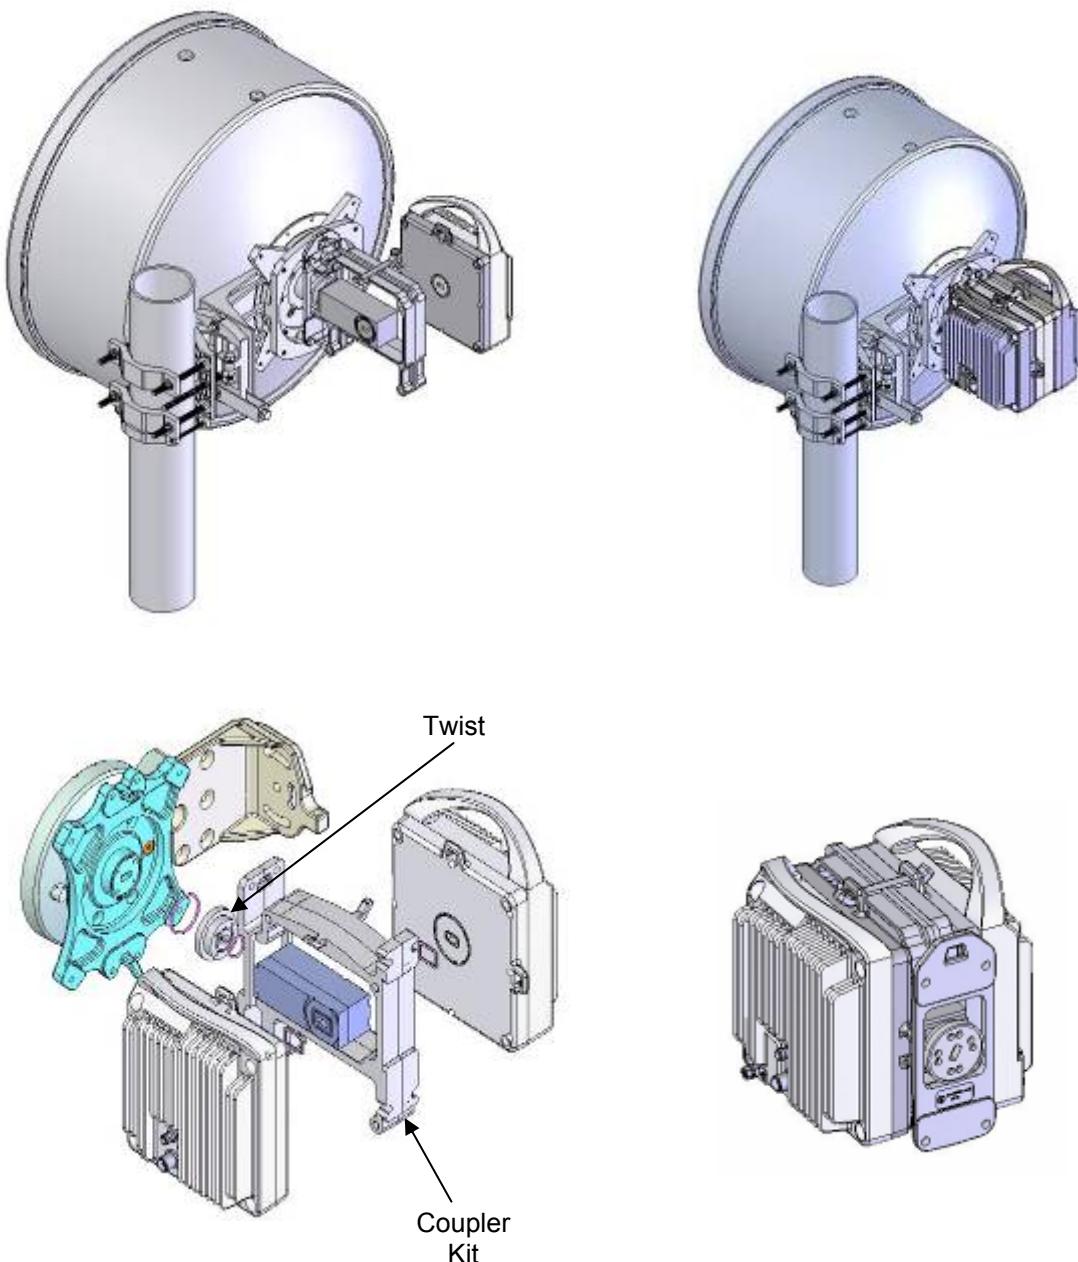

- | | |
|--------------------|---|
| Pole mount | Fastens the RFU-C to the pole. |
| Flexible waveguide | Connects the RFU to the antenna port (frequency dependent). |
| Adaptor | Low frequencies (6-13 GHz) require an adaptor between the RFU-C and the flexible waveguide. |

Direct Mount 1+1

The direct mount installation includes the following items:

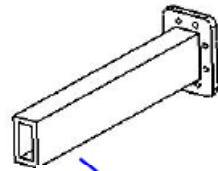

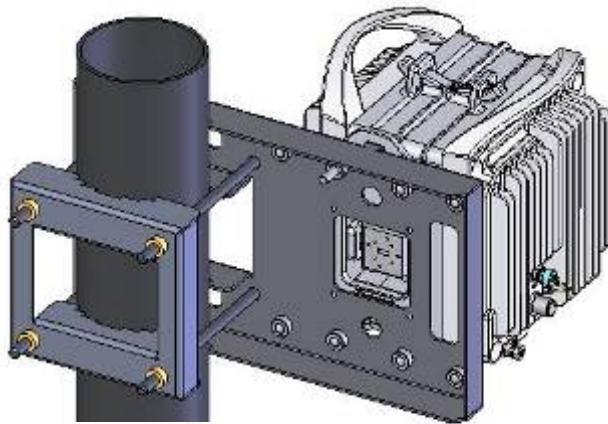

- CPLR Kit Includes a CPLR holder to hold the two RFUs side-by-side, and a coupler (per frequency band) located between the two RFUs.
- Twist Used to change from vertical to horizontal polarization.

Remote Mount 1+1

The remote mount installation uses the same items as those for the direct mount installation, except the twist, which is not required.

In addition, a pole mount is included, which holds the CPLR kit with the two RFUs. A flexible waveguide connects the coupler flange to the antenna port.

**Flexible
Wavguide**

Direct Mount 2+0

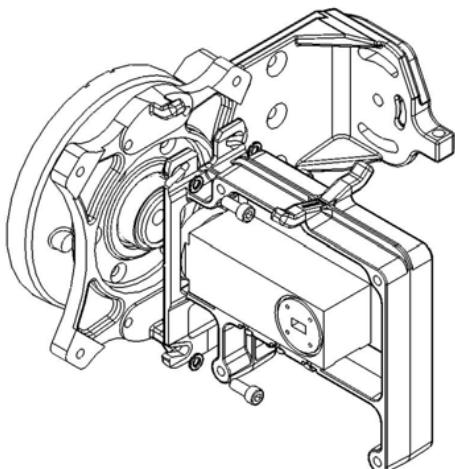

In a 2+0 configuration, two RFU-Cs transmit and receive in the same frequency channel, using two orthogonal polarizations. A single polarization antenna can be used with the Ceragon OMT for orthogonal separation between polarizations.

The direct mount installation includes the following items:

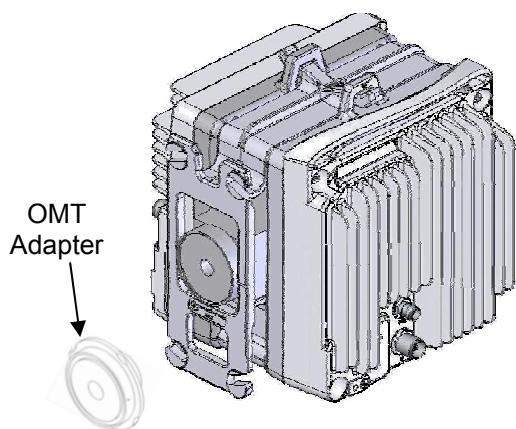

OMT Kit - This kit delivers two signals through a circular connection. The OMT is hosted on the RFU-C holder which holds the two RFUs side-by-side, with H & V polarization.

OMT Adapter - This is a Circular Transition connected between the OMT kit and the antenna feeder. The adapter is unique for each antenna vendor (Andrew, Radio Waves, and GD).

OMT Kit

RFU-C 2+0 Assembly with OMT Kit

Mediation Device (Antenna Mount) Losses

Configuration	Interfaces		6-8 GHz	11 GHz	13-15 GHz	18-26 GHz	28-38 GHz
Flex WG	Remote Mount Antenna	Added to remote mount configurations	0.5	0.5	1.2	1.5	1.5
1+0	Direct Mount	Integrated antenna	0.2	0.2	0.4	0.5	0.5
1+1 HSB	Direct Mount	Main TR	1.6	1.6	1.8	2	2
(with asymmetrical coupler)		Secondary TR	6	6	6	6	6
1+1 HSB	Remote Mount	Main TR	1.4	1.4	1.6	1.8	1.8
(with asymmetrical coupler)		Secondary TR	6	6	6	6	6
2+0 DP (OMT)	Direct Mount	Integrated antenna	0.5	0.5	0.5	0.5	0.5
2+2 HSB (OMT)	Remote Mount	Main TR	1.9	1.9	2.1	2.3	2.3
(with asymmetrical coupler)		Secondary TR	6.5	6.5	6.5	6.5	6.5
2+0/1+1 FD SP	Integrated Antenna		3.8	3.8	3.9	4	4
4+0 DP (OMT)	Remote Mount		4.2	4.2	4.3	4.4	4.4

Notes:

1. The antenna interface is always the RFU-C interface.
2. If other antennas are to be used, an adaptor with a 0.1 dB loss should be considered.
3. Mediation Device Loss Tolerance: OMT (2+0) +-0.1 dB, CPLR (1+1 HSB) +-0.7 dB

Item	Loss (dB)			
	6-8 GHz	11 GHz	13-15 GHz	18-38 GHz
Flexible Waveguide	0.5	0.5	1.2	1.5
Main Coupler	1.4	1.4	1.4	1.5
Secondary Coupler	6	6	6	6
Twist	0	0	0	0

Note: The numbers above are typical losses per component.

Antenna Connection

RFU-C uses Andrew, Xian Putian, GD, Radio Wave, Shenglu and RFS antenna types, as follows:

- Andrew: VHLP/HP series
- Xian Putian: WTG/WTC series
- GD: HP series
- Radio Wave
- Shenglu
- RFS: SB/SU series
- Other antennas with **suitable** flanges

RFU-C can be mounted directly for all frequencies (6-38 GHz) using the following antenna types (for integrated antennas, specific antenna PNs are required):

- Andrew: VHLP series
- Xian Putian: WTG/ WTC series
- GD: HP series
- Radio Wave: HP series
- Shenglu: SLC series

For remote mount installations, the flexible waveguide flanges listed in the following table should be used (milimetric). The same antenna type (integrated) as indicated above can be used (recommended). Other antenna types using the flanges listed in the table may also be used.

Frequency Band	Range (GHz)	WG Type	Radio side (Remote) Flange Des.	FlexWG both sides Flange Des.	FlexWG both sides Flange Des.	Antenna (Remote) Flange Des.

Other antenna types and flanges may be used with an adaptor. For details, contact Ceragon.

Environmental Conditions Standard Compliance

The system is fully compliant with the following standards:

Operational

ETS 300 019-1-4 class 4.1, with an operating temperature range of -35°C to 55°C.

Storage and Transportation

Storage: ETS 300 019-2-2 class 1.2, with a high temperature limit of +85°C.

Transportation: ETS 300 019-2-2 class 2.2

EMC

System EMC and ESD requirements comply with the conditions specified in EN 300 385 [9], for class B.

Safety Conditions Standard Compliance

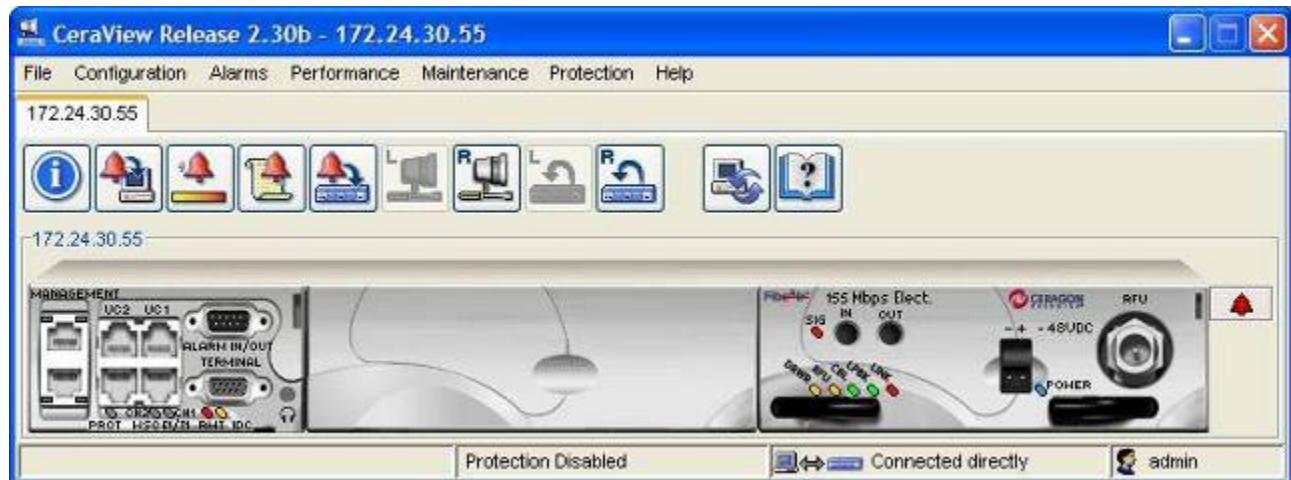

The system complies with the UL 1950 and EN 60950 safety standards.

Management

Ceragon provides state-of-the-art management based on SNMP. Our management applications are written in Java code and can control Ceragon units at both the element and network levels.

The applications run on Windows 2000/2003/XP/Vista, UNIX, and Sun Solaris.

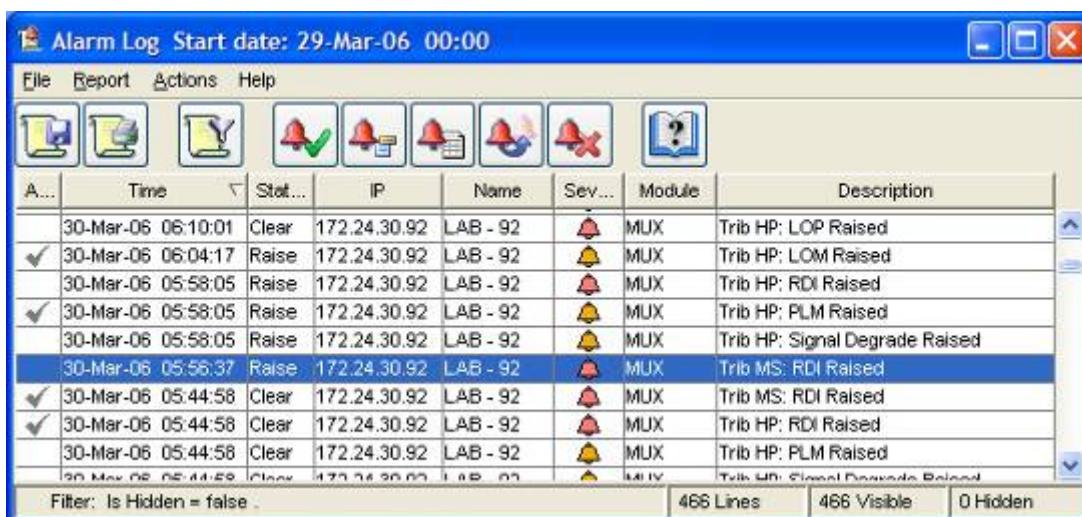

CeraView® is Ceragon's EMS (Element Management System) that enables the operator to perform element configuration, performance monitoring on RF and SDH/SONET levels, remote diagnostics, alarm reports, and more. CeraView® integrates with different NMS (Network Management System) platforms, such as HP OpenView and SNMPC, to provide more comprehensive system management.

Example of CeraView® Main Window

PolyView™ is Ceragon's network management system that can monitor network element status, provide statistical and inventory reports, download software and configuration to elements in the network, and more.

PolyView™ includes CeraMap™, its own powerful and friendly graphical interface. It can also integrate with other NMS platforms, such as HP OpenView, to provide more comprehensive network management.

Example of PolyView™ Window

FibeAir IP-10 is managed by an integrated Web-Based Element Manager. Each device includes an HTTP based element manager that enables the operator to perform element configuration, RF, Ethernet, and PDH performance monitoring, remote diagnostics, alarm reports, and more.

The screenshot shows the CERAGON FibeAir IP-10 Web Management interface. The title bar reads "Web Management - Windows Internet Explorer" and the URL is "http://10.10.11.119/". The menu bar includes File, Edit, View, Favorites, Tools, Help, and a McAfee SiteAdvisor link. The toolbar includes Home, Feeds, Print, Page, and Tools. The main content area has a header "Unit 10.10.11.119" and a "Logout" link. On the left is a navigation tree with "Main View" selected, followed by Faults, PM & Counters, Configuration (General, Ethernet Switch, Radio), Interfaces (Ethernet Ports, T1 Ports, Wayside Channel, User Channel), Protection, Diagnostics & Maintenance, and Security. In the center, there is a large image of the FibeAir IP-10 hardware, which is a compact device with multiple ports labeled: Terminal, Alarm I/O, UC, RJ45, S-VIDEO, E1/T1 1-16, and various MGT and WS ports. Below the device image, it says "License type Demo" and "Demo timer 55 days, 12 hours." A "Refresh" button is also present. The bottom right corner of the browser window shows "Internet" and "100%".

FibeAir RFU-C Specifications

Note: All specifications are subject to change without prior notification.

General

Capacity	Variable 10-500 Mbps per IDM
Channel Bandwidth	7/10/14/20/25/28/29.65 /29/30/40/50/55/56 MHz
Modulation Type	QPSK, 8PSK, 16, 32, 64, 128, 256 QAM
System Configurations	Unprotected: 1+0, 2+0 Protected: 1+1, 2+2, Co-channel operation with XPIC (CCDP) Space Diversity, Frequency Diversity
Wayside Channels	E1/DS1, bridged Ethernet 10BaseT per carrier
User Channels	V.11, or RS-232, or 10BaseT, or G.703 (optional)
Engineering Order Wire	CVSD audio channel (64 Kbps)
Interface Modules	E1s, T1s STM-1/OC-3: Electrical - CMI/BNC, Optical - SM/SC, SM/MM Fast Ethernet: 10/100BaseT Fast Ethernet, Auto-negotiation, Full/Half duplex GbE: SFP: Electrical 1000BaseT, Optical 1000Base-LX (1310 nm) or SX (850 nm)
Switching	Hitless, Errorless
Payload Types	TDM: PDH-E1s/T1s, SDH:STM-1, SONET OC-3, ATM: ATM over SONET/SDH IP: Ethernet

Network Management

Type	SNMP, in compliance with RFC 1213, RFC 1595 (SONET MIB)
Local or Remote NMS Station	CeraView and PolyView with advanced GUI for Windows 98/2000/XP/NT or UNIX, integrated with HP OpenView
NMS Interface	Ethernet bridge 10Base-T, RS-232 (PPP, SLIP), built-in Ethernet hub
Local Configuration and Monitoring	Standard ASCII terminal, serial RS-232
In-Band Management	DCCr, DCCm, media-specific, proprietary
TMN	Ceragon NMS functions are in accordance with ITU-T recommendations for TMN
Performance Monitoring	Integral with onboard memory per ITU-T G.828

Mechanical/Electrical

RFU-C	Height: 200 mm Width: 200 mm Depth: 85 mm Weight: 4kg/9 lbs
RFU-Antenna Connection	Direct mount or remote using the same antenna type Remote mount: Standard flexible waveguide (frequency dependent)
IDU-RFU Connection	Coaxial cable RG-223 (100 m/300 ft), Belden 9914/RG-8 (300 m/1000 ft) or equivalent, N-type connectors (male)
Power Consumption RFU-C 6-26 GHz	1+0: 22W 1+1: 39W
Power Consumption RFU-C 28-38 GHz	1+0: 26W 1+1: 43W
Temperature Range	-35 C to +55 C
Relative Humidity	Up to 100% (all weather operation)
Operating Range	-40.5 to -72 VDC
Polarization	Vertical or Horizontal
Standard Mounting OD Pole	50 mm-120 mm/2"-4.5" (subject to vendor and antenna size)
